

Client log file is a file that is created by the client terminal. Every second client terminal monitors all occurring in the terminal events associated with requests that are sent by the Client to the Server via the Company's trading platform, fixing them in the log file to the nearest second. The log file allows the the Customer to analyze in detail all of them carried out trading activities in order to improve its trading system. Keeping the history of trade events occurring is extremely necessary thing to investigate any discrepancies and errors that can cause problems with both the Client and the Company. The log file is used to display the history of the account on the trading terminal and to the formation of a detailed report of a trader for a certain period of his work.
