

**The client terminal** is a software product MetaTrader 4.xx, which enables the customer to receive the latest information from the financial markets, which includes a display of quotes for all currency pairs in real time, as well as get the latest information about the events in financial markets directly in the terminal window. The client has the ability to display all the quotes in the form of three types of charts: line, bars, and a candle, as well as an analysis of future price movements, using a large number of trading indicators, levels and lines, and many other trading tools.

The client has the ability to trade on the purchase and sale of a financial instrument based on his analysis, and display the pending orders and modify open positions. In the client terminal built a special tool to create indicators and advisors - the programming language MQL (Meta Quotes Language). Using this programming language, the client can create his own advisors and indicators that can be freely used in his work. In the client terminal is built to allow the possibility of live trading. Thus, the client can pass on it trade in the forex market, as in this case does not require the mandatory presence of the Client near the client terminal.
