Stop Out is an order for compulsory closing trading position (s) in the case of an insufficient number of free margin. This order is generated by the trade server. Stop out is the state of account when the marginal rate falls to a specified broker-level or even lower. As a result, the broker immediately closes all open trading positions in order to avoid losing money. Stop out fear as a trader and broker of the utter bankruptcy of the account. Stop out is a critical level of losses, which operates automatically to prevent a capital loss. As a result, the availability of such insurance, the trade balance is always positive. Calculating stop out is determined depending on the number of open positions and account status. The formula for calculating this level the following: Stop out = ((balance + floating profit - floating loss) / Margin) * 100%. Stop out is described in percentages.
